#### **Note:**

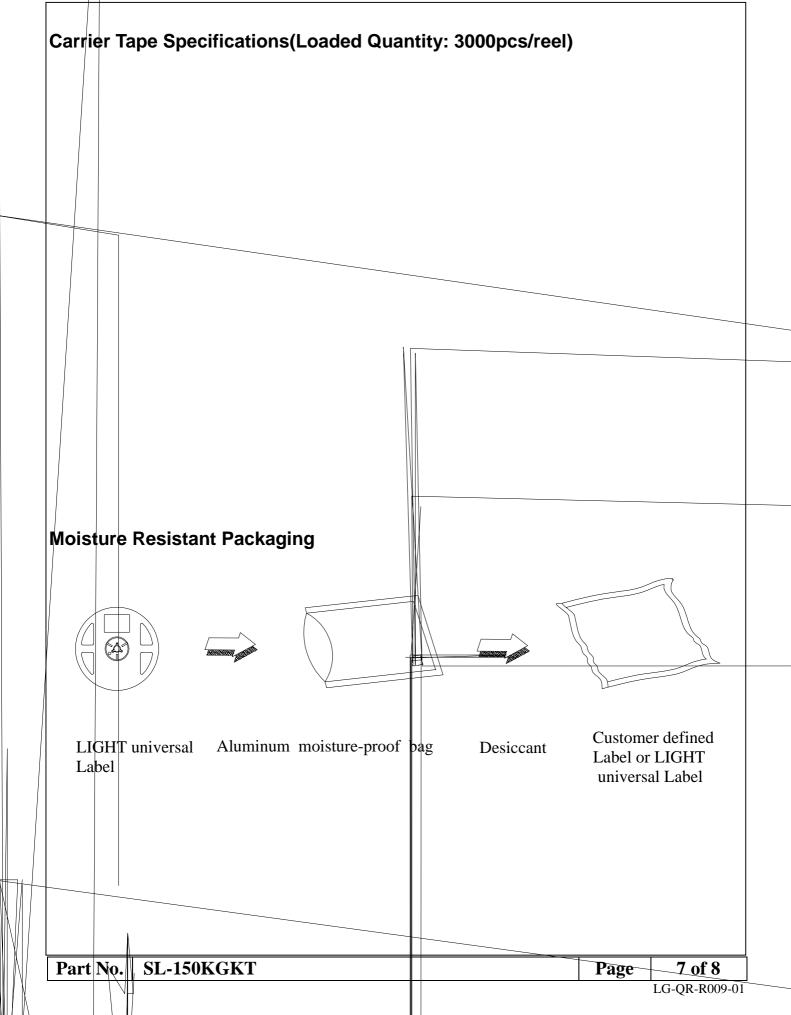

- 1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve. Tolerance of Luminous Intensity:  $\pm 15\%$ .
- 2.  $_{1/2}$  is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- 3. The dominant wavelength, d is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device. Tolerance of Dominant Wavelength: ±1.0nm.
- 4. Tolerance of Forward Voltage:  $\pm 0.1$ V.

- 1. Reflow soldering should not be done more than two times.
- 2. When soldering, do not put stress on the LEDs during heating.

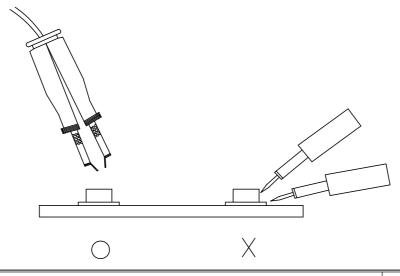

### Soldering iron

- 1. When hand soldering, the temperature of the iron must less than 300°C for 3 seconds.
- 2. The hand solder should be done only once.

## Repairing

101 be done after the LEDs have been soldered. When renairing is unavoidable, a

double-head soldering iron should be used (as below rigure). It should be confirmed beforehand whether the characteristics of LEDs will or will not be damaged by repairing.
